I. OPEN DISASTERS/EMERGENCIES:

II. WEATHER:

Critical fire weather conditions across Southern and Central California foothills and mountains this evening through Sunday evening due to gusty northeast winds, low humidity, warm temperatures, and dry fuels. Very warm and dry conditions will maintain elevated fire danger into Monday.

State Weather Map

III. FIRES:

Overall Fire Risk:

Northern California

Continuing dry weather conditions will keep all dead fuel size classes much drier than normal. Dormant brush fuels will remain in at dry, late fall levels. We are experiencing various stages of long term drought with severe to locally extreme drought conditions covering most of Northern California. There have been record low rainfall totals in many areas this calendar year adding to ongoing longer term drought over the past 2 1/2 years. Fire danger will be somewhat unseasonably elevated mostly during breezy times, especially at lower elevations in the southern end of the Geographic Area.

Southern California

Warm and very dry conditions will continue to allow for light initial attack activity across the region through the forecast period. Large fires will be unlikely due to a lack of widespread strong offshore winds.
